

# Waste Management

## Conversion of processing waste to Offal

Tanmiah currently produces large volumes of offal per day. Given the large quantity of offal, Tanmiah deems it necessary to find environmentally acceptable solutions in line with Tanmiah's green initiatives.

Tanmiah's Offal Rendering Management Systems minimizes the environmental impacts and contributes to both animal and human wellbeing.

The current system enables the offal to be used as either animal feed or fertilizers, while reducing the strong odour, bacteria yeast, mould and E. coli.

Tanmiah specializes in recycling animal by-products and exports the final offal meat product through third parties.
